

# V110

## PRODUCT DESCRIPTION

**V110 WIRED/WIRELESS BROKER** - a versatile DALI2 Application Controller capable of managing up to 192 DALI control devices. Its flexible licensing model allows you to pay only for the features you need. This controller enables you to control DALI-enabled luminaires, switches, sensors, and other input devices. Each unit has a unique IP address and an integrated HTML page for easy commissioning, basic control, fault monitoring, and emergency lighting test reporting.

Additional features include Daylight Linking, Tunable White, Circadian Rhythm, Schedules, and Scenes.

V110 not only connects to DALI2 products but also serves as a gateway to a building data engine. By collecting information such as energy consumption and lux level values, V110 can share this data with BMS systems or software packages (such as Tridonic LightMONITOR) enabling users to manage their installations more sustainably. Each controller can share information via BACnet, REST API, or MQTT, making it an ideal solution for integrating lighting into BMS and Smart Building platforms.
