

# V312

## PRODUCT DESCRIPTION

**V312 PIR DALI Dimming Sensor** - a DALI-2 certified occupancy detector with an integrated DALI application controller and power supply, designed for energy-efficient lighting control. It supports broadcast control of dimmable ECGs, with manual switching and dimming available via conventional pushbuttons.

Offering multiple operating modes, adjustable regulation dynamics, daylight harvesting, and the ability to extend coverage with slave devices, the V312 provides both flexibility and efficiency. Features such as last-value memory, PIN protection, corridor function, and switchable status LEDs ensure reliable operation.

Easy to install, the unit is supplied with a pre-assembled spring clamp, strain relief, and protective cap for recessed ceiling mounting, with a surface option also available. Pre-set with a 10-minute follow-up time and 500 lux brightness level, the V312 delivers smart, adaptable, and sustainable lighting control for a wide range of applications.
