

V321

PRODUCT DESCRIPTION

V321 WIRELESS OUTDOOR PIR SENSOR - a high-performance sensor designed for street lighting applications. This sensor monitors ambient light, detects occupancy, and measures temperature, providing valuable data for intelligent lighting control. Equipped with two built-in PIR sensors, it offers extended features like detecting objects with side orientation. Its low energy consumption over the DALI-2 bus ensures efficient operation, while the Zhaga Book 18 Ed. 3 receptacle enables easy installation.

The rectangular detection area is ideal for street applications (supporting a coverage area at 8 m height of up to 35 m x 16 m = 560 m²), and the built-in pressure equalizing membrane protects the sensor from environmental factors.

Fully compatible with DALI Part 351, including MB201, this sensor offers reliable performance and long-lasting durability. With a lifetime of up to 100,000 hours at 60°C and a 5-year guarantee, the V321 PIRSense is a trusted choice for street lighting control.
