

V340

PRODUCT DESCRIPTION

The **V340 DALI-2 Input Controller** provides a reliable interface between standard momentary switches and DALI-2 certified lighting control systems. Designed for simplicity and flexibility, it allows direct user control of DALI-2 networks in both commercial and architectural applications.

Featuring four independent inputs, the module supports connection of floating contacts or standard momentary switches, giving users precise control over multiple functions or lighting zones. Multiple DALI-2 input controllers can operate on the same DALI line, allowing scalable and adaptable configurations across an installation.

Powered directly from the DALI-2 line, the unit requires no additional power supply and can be neatly installed within a standard mounting box behind the switch plate. The controller is compatible with DALI-2 certified application controllers and DALI-2 compatible systems.
