

V350

PRODUCT DESCRIPTION

V350 7" Touchpanel provides an intuitive and versatile interface for the operation and configuration of a SceneCOM evo lighting control system. Offering full access to the system's web-based user interface, it allows users to manage lighting scenes, schedules, and settings directly from a single, easy-to-use control point.

Equipped with a vibrant colour display delivering a resolution of 1024 x 600 pixels, the Touchpanel ensures clear and responsive visual feedback during operation. Running on a reliable Linux operating system with a pre-installed web browser, it connects seamlessly to a SceneCOM evo controller for smooth system integration.

Designed for convenient wall installation, the unit can be mounted using an optional wall-mount box and features an integrated LAN connection for secure communication. The panel is powered via PoE+ or an external power supply, available separately as an accessory.
